

Nexus Telematics GT1e

GPS Tracking Device

Nexus Telematics GT1e

What is GT1e?

GT1e is an equipment with an advanced function which transmits GPS locations in real time.

The product is designed on an easily expandable platform, which offers the capability to connect to external accessories through the equipped connection ports.

With this you will have access to detailed data about the status of the vehicles from your company.

What is GT1e?

The usefulness of this equipment can also be extended with the RS-232 Interface, which allows the connection to auxiliary systems that use serial communication and to CAN interfaces.

This way, GT1e is customizable for any kind of business.
